

Experiment Plexiglas

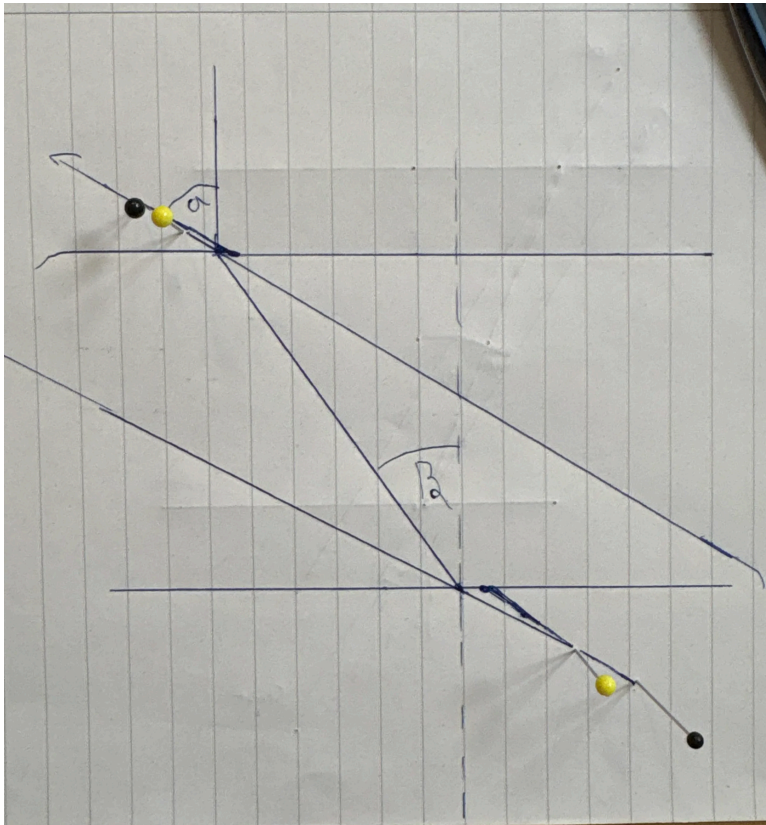

$$\beta = 22^\circ$$

$$\alpha = 33^\circ$$

$$\frac{\sin(\alpha)}{\sin(\beta)} = \frac{n_p}{n_L} \rightarrow n_l \approx 1$$

$$\frac{\sin(58)}{\sin(22)} = \frac{0.687}{1} = 0.687 = n_p$$

$$V_p = \frac{c}{n_p} = \frac{299792458}{0.687} = 436379123.7$$

$$\alpha = 58^\circ$$

$$\beta = 35^\circ$$

$$n_p = 1.47$$

$$V_p = 202836575.1$$
